3. The following is an examiner's statement of reasons for allowance:

The present invention is directed towards a method for managing encryption keys through the use of portable processors. Each independent claim identifies the uniquely distinct feature of "an incrementor for increasing the value of the reference number in response to the encryption key being generated."

The closest prior art, Bjerrum (U.S. Patent No. 5,311,595) in combination with Butler (U.S. Patent No. 6,094,487) discloses a design that pertains to transferring data between computer systems via the use of portable electronic cards.

However, Bjerrum and Butler's design does not teach or suggest an incrementor for increasing the value of the reference number in response to the encryption key being generated as called for under each independent claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
